

Get Connected with Windows Devices

Connecting to Hanover's wifi networks on Windows devices is extremely easy. Follow these steps to get connected.

1. Locate the network you need to connect to in the wifi menu and click it to begin connecting.
 - a. HC Students for all students
 - b. HC Faculty Staff for all employees
2. If you are logged into a device on Hanover's domain (such as an employee device), you should be able to check the "Use my Windows user account" box and have the username and password fields be automatically filled for you. Then all you will need to do is hit the "OK" button. If you are on a personal device, you will need to enter a username and password manually. You will use your Hanover username and password to do so. **(Your username is what is before the @ in your email address)**

3. Next you will need to hit the “Connect” button.

If you have any issues, please reach out to the IT Helpdesk by phone (812)866-6899 or by email help@hanover.edu
